Andrew Gendel

Product Designer, Content Foundations and Design Systems

San Jose, CA | 925.360.7983 | agendel.design@gmail.com | www.agendeldesign.com

SUMMARY

Design systems product designer with 5 years of experience at Roblox, IBM, and HashiCorp, specializing in the standards layer: documentation structure, voice, terminology, naming, and governance that keep a product feeling like one system across teams. Builds human-facing and AI-readable standards that stay in parity, so designers and AI agents produce consistent, on-system output. Uses AI to automate design system workflows and has driven adoption of standards across product, engineering, and content design partners.

EXPERIENCE

Roblox | Product Designer, Foundation Design Kit | Jan 2026 – Present

- Own the structure of Foundation Design Kit (FDK) reference material across two surfaces: the human-facing FDK website and Figma library, and an AI-readable version feeding Design Assist, Roblox's internal AI design tool. Restructured component documentation, usage rules, and patterns into machine-readable guidance so designers generate on-system layouts out of the box.
- Standardized component documentation on the FDK website into one consistent structure and voice, working with Content Design partners to align terminology, tone, and writing patterns across pages.
- Reorganized the FDK Figma library taxonomy, defining naming and information architecture conventions used across the component library.
- Created an AI-powered documentation workflow that converts design system consumer feedback into written draft pull requests, reducing manual drafting and shortening the path from reported gap to published update.
- Drove FDK adoption to 80% across all product teams through governance standards, clear contribution paths, and partnership with design, engineering, and content design.
- Define component architecture and WCAG 2.2 AA accessibility guidelines written for both human designers and AI agents.

IBM (formerly HashiCorp) | Product Designer II, Design Systems | 2025 – Jan 2026

- Evolved platform-level foundations, including color, typography, motion, iconography, and components, for a cross-platform product ecosystem serving 500K+ users.
- Owned WCAG 2.2 AA accessibility standards across design tokens, component states, and production code.
- Built token-based standards in Figma and code that reduced implementation variance and accelerated delivery across 9+ product teams.

HashiCorp | Product Designer I, Design Systems | 2023 – 2025

- Led design of UI components and pattern libraries used across 9+ product teams, focused on consistency, accessibility, and cross-platform behavior.
- Designed mobile-optimized components with responsive breakpoints, spacing tokens, gesture support, and 44px touch targets for iOS and Android.
- Facilitated design reviews and working sessions with 15+ stakeholders to resolve conflicts and align on platform direction; partnered with engineering through QA on token, motion, and layout fidelity.

HashiCorp | Associate Product Designer and Intern, Design Systems | 2021 – 2023

- Built foundational elements of the Helios Design System, including color primitives, type scales, grids, and light and dark themes.
- Co-designed components and specifications for engineering handoff; authored Figma and Storybook documentation; contributed to token architecture, accessibility audits, and governance.

SKILLS

Content and Standards: Content standards, voice and tone, naming and terminology, information architecture, documentation systems, governance, contribution models, adoption strategy, cross-functional enablement

AI and Agentic Design: AI-ready design systems, human/AI documentation parity, agent-consumable documentation, machine-readable component metadata, context engineering, AI-assisted documentation workflows, prototyping with Claude and Cursor

Design Systems: Component architecture, design tokens, pattern libraries, version management, cross-platform systems

Visual Design and Accessibility: Color, typography, iconography, motion, light and dark themes, WCAG 2.2 AA, accessible interaction patterns

Tools: Figma, Figma Variables, Storybook, Zeroheight, Git, HTML, CSS, React, Ember

EDUCATION

B.S. Visual Communication Design, San Francisco State University, 2019 – 2022
